

Delivering sharpness

Slitter Care Service

Your benefits

- + Full scope of high-quality service for the slitter section
- + Sharpening service performed at Voith or at customer site
- + Available for all types and sizes, regardless of manufacturer
- + Reduction of maintenance costs
- + Operation and process training developed and delivered by Voith experts

Full scope of services

One of the final steps of the paper production is cutting the web into sections. To be able to utilize the full width without unnecessary losses in the further process steps is only possible if this cutting is done with the fitting and correctly maintained slitters. The wear of your slitters is not only depending on the quality of the slitters, the production or the operational parameters. The wear itself also has a major impact on the life of the slitters. In addition, a mismatch of the various parameters can lead to an unnecessary increase in maintenance costs.

Analyzing and consulting

An inspection of your installation by a Voith specialist with process and operational knowhow is essential to extend the life of your slitters and increase the reliability of your installation. In consultancy with our customers and based on the inspection and thorough analysis, we can supply and maintain the best slitters for your needs.

Slitter Care Service is a part of the Voith Paper service portfolio

Equipment services

Installation & commissioning services

- Installation service
- Commissioning service

Voith service scope

Our slitter service goes much further than just grinding your slitters. Voith wants to support you in all aspects, i.e.: monitoring, exchanging, transporting, grinding as well as providing a coating and supplementing based on your inventory management. This ensures that your winder is equipped with sharp top and bottom slitters at all times. Every service package will be customized based on the individual requirements.

Regardless of manufacturer

By the use of tracking codes, the lifecycle is monitored in order to prevent premature failure. The applied grinding procedures ensure that burrs are minimized and the lifetime is maximized. We offer the service regardless of type, size or manufacturer of the slitters.. In most cases we offer our service from our workshop including pick up and return, but in many cases this can also be done at your location.

Training and prevention

To minimize premature failure of your slitters, your operators can be trained by our experts in recognizing and solving problems.

Customer benefits

- **Significant extension of lifecycle**
 - **Reduction of maintenance costs**
 - **Optimization of materials, geometry and operational variables**
 - **Implementation of tracking codes**
 - **Sharpening services performed at Voith or at the customer**
 - **Operation and process training developed and delivered by Voith experts**
