

Transmitting maximum torques safely Flexible CT-P Coupling

CT-P couplings can safely transmit the highest torques of all CT couplings. This can be up to 43000 Nm depending on their size. Additionally, axial and radial misalignments in the driveline are compensated, backlash forces eliminated and shock-loads dampened.

This coupling type thus provides an optimal solution for heavy industry drives where the engine and the driven equipment are mounted separately. Typical applications are shredder and crusher systems, generator sets, compressors, fans and roller conveyor drives in steel plants.

Coupling parameters

Size	Nominal torque	Maximum torque	Vibratory torque	Allowable dissipated heat	Maximum speed
	T_{KN} (kNm)	T_{Kmax} (kNm)	T_{KW} (kNm)	P_{KW} (W)	(1 rpm)
27	9.0	27.0	3.375	870	2650

130	43.3	130.0	16.25	1 369	1600

T_{KN} : Continuous transferable torque

T_{Kmax} : Maximum transferable torque, risingly to be endured at least 10^5 times and alternatingly at least 5×10^4 times

T_{KW} : Torque amplitude, to be continuously endured at 10 Hz and 20°C environment temperature

Valid for all charts:

When selecting the size, not all catalogue values need necessarily to be observed.

If the catalogue values are exceeded, it is however mandatory to consult Voith.

Sizes bigger than CT-P 130 are available on request.

In the CT-P coupling, the damping effect is achieved by elastomer elements that are compressed under torque. Just like all of our CT couplings, the design of the CT-P is also virtually fail-safe and does not require lubrication. It provides long-term protection against unscheduled downtime.

Components of a CT-P coupling
