VOITH

Equipment services Headbox service and spares

The performance of the headbox is decisive for the overall quality of the paper produced. Preventive maintenance and parts management guarantee that the headbox is in proper condition. With Voith's headbox service and spares, paper producers profit from both the technological and mechanical know-how of a full-line supplier as well as perfectly fitting original equipment that keeps the headbox as good as new over the entire lifecycle.

Preventive maintenance and parts management for highest productivity

Preventive maintenance guarantees that your headbox is always in proper condition. In case of any irregularities, our service experts will be able to bring your headbox back to optimum performance by using Voith spare parts.

All state-of-the-art Voith headboxes have efficient cross profile control devices, for example, by slice lip adjustment and by dilution control.

Voith was one of the first manufacturers to build a headbox with a replaceable bottom lip. The replaced bottom lip can be refurbished in original condition. This allows us to shorten the machine downtime to a minimum while performing an efficient service.

All-round service for your headbox

As an OEM we support our customers with deep process know-how and the best equipment. Thanks to more than 100 years of experience and knowledge as a system supplier, your headbox will be almost new after the service. In addition, we offer many of our services as in-house repair, saving our customers time and money.

Our service portfolio for the headbox includes

- Service schedule planning and required labor and tools
 - Exchange of slice lip including adjustments
 - Exchange of bottom lip including alignment
 - Replace OEM spare/wear parts
 - Realignment under simulated operation pressure
 - Exchange of lamellas and separating wedge
 - Exchange of inserts
 - Start-up support
 - TSO optimization
 - Automation package calibration
 - Vibration measurements
 - Pulsation measurements
-

State-of-the-art inserts

Inserts can be made of different kind of materials like PEI or PPSU. Inserts made of PEI could be easily brittle due to chemical influences and high temperatures and therefore have a very limited lifetime. We at Voith prefer to supply very consistent and high-quality inserts made of PPSU. This material also leads to a long service life of the inserts in the strong acidic area.

PPSU inserts from Voith

Servolution – Service at the next level

At Voith, the success of the customer takes center stage. Service means delivering customized service solutions and utilizing our full expertise to help each customer reach his goals.

Our tailored service packages focus on results. We improve performance, increase productivity and meet output objectives for our customers' paper mills. Our global service sites and novel smart technologies allow us to work proactively. We are developing predictive service tools allowing us to know in advance when and where maintenance or optimization measures are needed in a paper mill.

This is what we mean by service at the next level. Integrated service intelligently adapted to meet the requirements of our customers – giving them a first-class customer experience. This is Servolution.

Our Service –
Part of Your
Business.
