

## Hydraulic Ram Control Unit HSE NG 25

Pumps and Hydraulic **Solutions**  
from Voith Turbo H+L hydraulic.  
Systems **Especially for You**

### Design and Function

#### Common features of VTHL ram control units:

- modular design
- robust valve elements
- high dynamics
- simple control structure

The integration of all necessary valve components into a manifold mounted directly on the block cylinder results in a compact design and best power density. Together with additional mechanical feedback, the hydraulically piloted main valve

forms the basis for the stroke control.

Tdc (top dead center) control is always with mechanical closed loop feedback. Bdc (bottom dead center) control may be with electrical feedback or with mechanical feedback control, depending on the application.

The hydromechanical design of the stroke control unit offers an accurate and drift-free tdc. Due to the fast steering process, the bdc has a good repeatability as well.

## Features

- highly dynamic punching and shearing drive for shortest cycle time
- smooth stroke operation via hydraulically damped cylinder ram
- stable tdc position without drift
- exact bdc reversing for process safe stroke operation
- manually adjustable stroke positions; optionally electrical
- simple functions with robust valve technique
- monitored processes with low control complexity

## Options

- ram control units NG 6 and NG 10 for lower force range
- ram control unit HSP for programmable stroke positions
- complete punching systems

## Applications

- punching/nibbling
- shearing/cutting
- stamping

## Examples of Applications

Application	Specific Performance
Linear Punching Installation	Punching force: 1600 kN
	Total cycle time at 6 mm stroke: 125 ms
Section Shearing Machine	Shearing force: 800 kN
	Total cycle time at 100 mm stroke: 860 ms

# Technical Data

<b>General</b>		
Ram force	kN	up to 2000 (standard design)
Ram return force		approx. 20% ram force
Operating force tdc	N	450 at 80 bar control pressure
Operating force bdc	N	150 (at mechanical bdc reversal)
Ambient temperature	°C	-5 to +50
Mounting position		mountable in any position

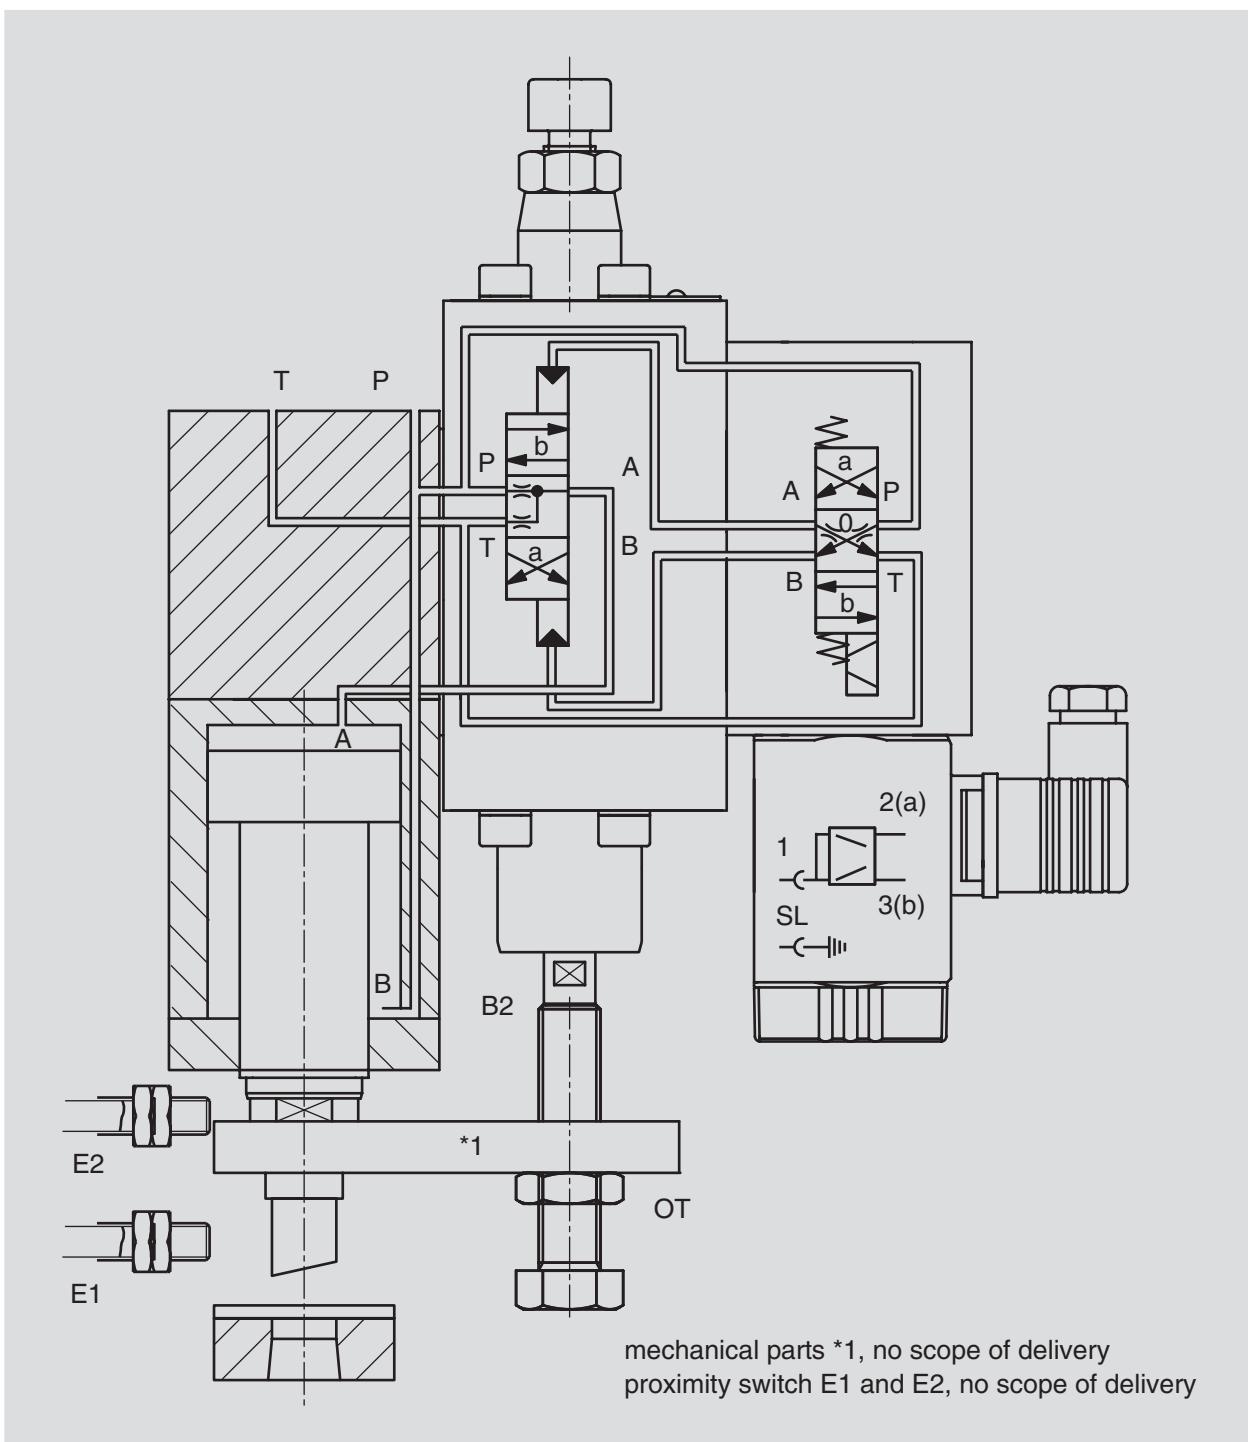

<b>Hydraulic</b>		
Operating pressure	bar	max. 250
Control pressure	bar	80
Hydraulic oil temperature	°C	-10 to +70
Viscosity range	mm <sup>2</sup> /s	10 to 300

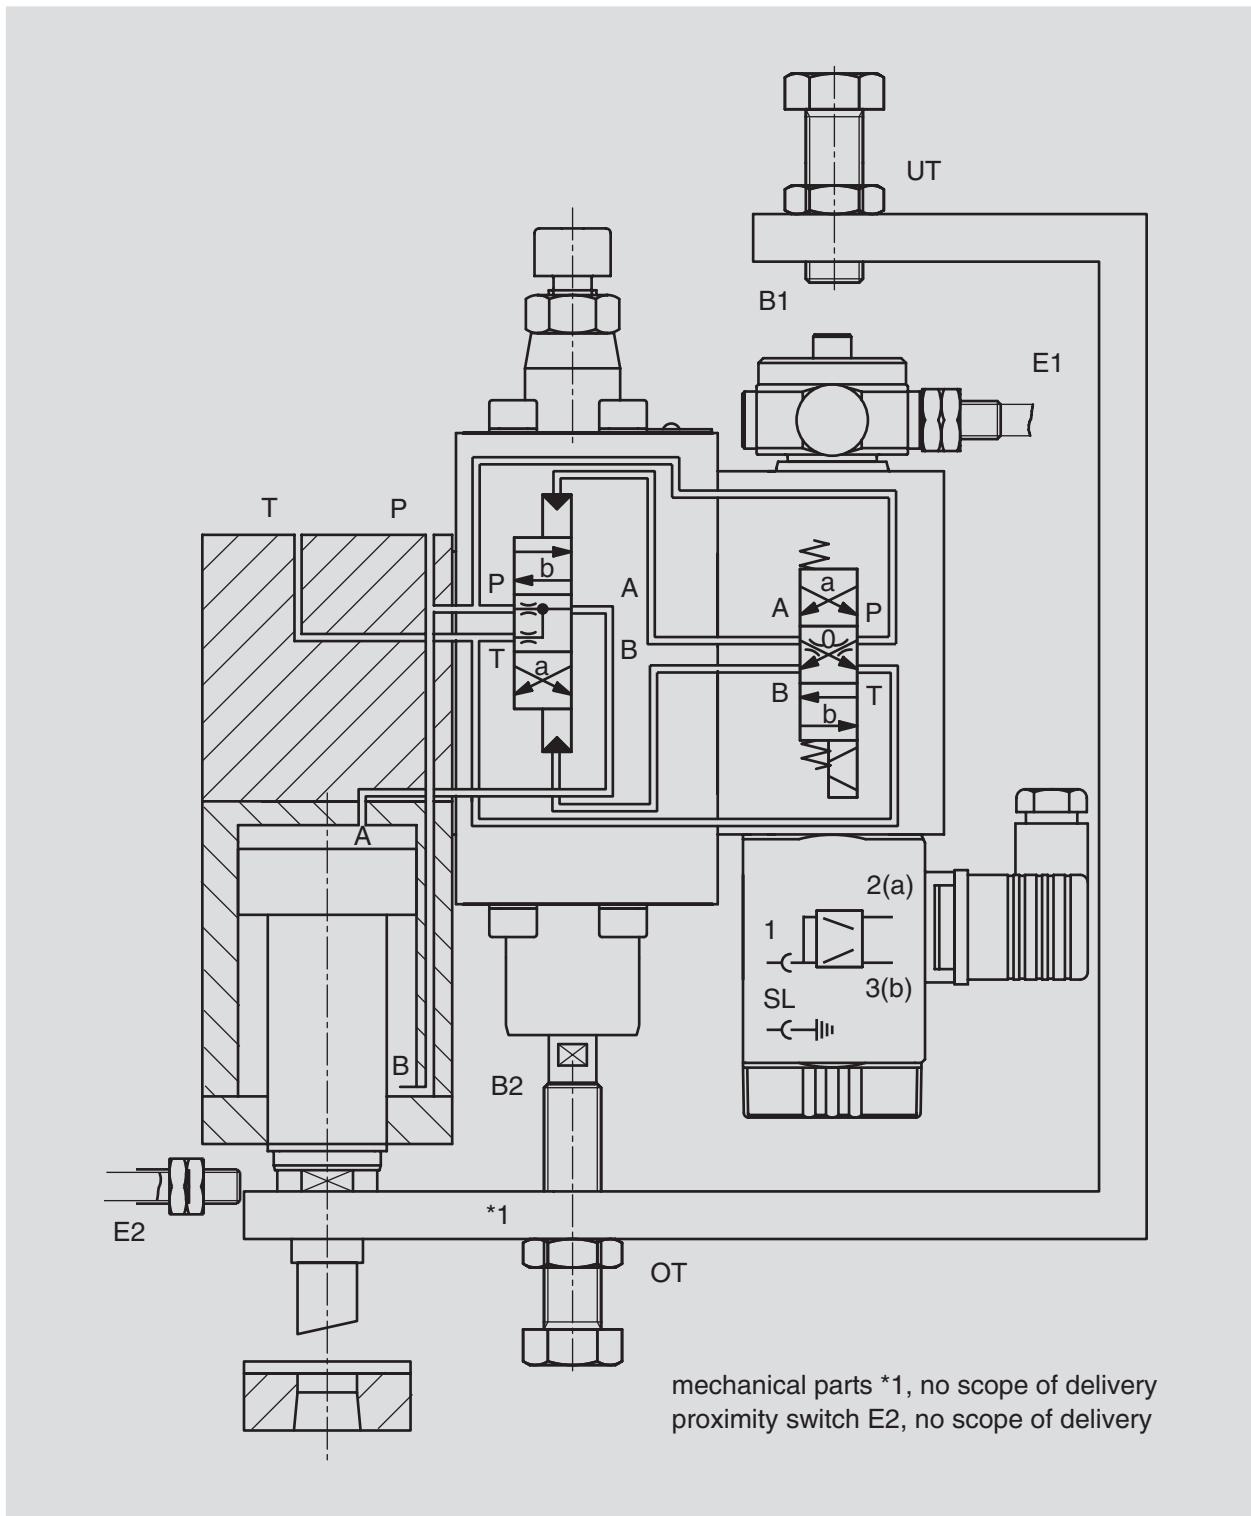

<b>Electric</b>		
Valve control		VTHL stroke control HS2 (data sheet: 9.1.1)
Valve voltage ( $\pm 10\%$ )	V	24 DC
Switching time „Start“	ms	8 ms (HS2)
Valve switching time from „bdc“	ms	7 ms (HS2)
Power consumption P20	W	20
System of protection DIN 40050		IP65 with valve plug connected

Further specific performance data according to computation minutes.

## Electronic Control

The ram control units HSE are delivered with an electronic control, the link between hydraulics and machine control. This control is adapted to the application.

Please refer to the technical data from the data sheet of the electronic control.
